MAILWRAP
SIMPLE AND EFFECTIVE POLYWRAPPING

Up to 6000 packs per hour, the mailwrap produces packs of dimensions between A6 and A4+ and up to 22mm thick).

Operator control is through a touch screen This enables station selection, speed and heat settings.

There is a re-settable counter, and the screen displays the current speed, heat settings, error location and further run information. Heat settings are preset for a given throughout but can be adjusted by the operator to suit the thickness of film.

The insert stations can handle a wide variety of documentation including single sheets, card, reply envelopes, pre-folded items, CD's and books. There is also a hand feed position.

It is possible to pre-select the number of items fed from each insert station on each cycle and have the feed switch automatically from one station to another when a feeder runs low.

Each insert station has a miss, double and jam detector and there are further sensors throughout to check the path of the document through the system. An error automatically stops the Mailwrap and location is displayed on the control screen.

Additional feeders can be added to facilitate the use of reading technology or feed thicker material.

Features

- Pivoting touch screen control provides run information, error location and help pages
- Close fitting wrap
  Adjustable Bag Length
- Cassette loading system for film Print Registration
- Sequential start-up/Clear down
- Top load feeders for ease of filling, without stopping the machine
- Miss & double feed detectors on feeders
- Document track sensors
- Low level sensors on feeders
- Multiple feeding from each feeder to a preset number
- Station linking to increase loading capacity
- Hand feed position
- Simple set up and changeover
- Output delivered onto a conveyer stacker
- Choice of reading
- Technology available
- Data log software
